CHAPTER 1 | INTRODUCTION AND BACKGROUND

The promotion is quite interested offer from the hotel, restaurant, shopping mall and etc to the customer. The owner can earn higher profit. Although, the promotion can make more profit, but sometime the customer doesn't know which restaurant has promotion and which one doesn't have, so we decided to develop an application that collect the promotions and provide it to the user.

Over the course of the project, we will establish an iPhone application, database, and server that use PHP to develop. A quick review of similar application can be found in the Business Review section, the idea of the system will be to focus on letting user application know any promotions from any restaurants.

Update real time promotion from the restaurant or hotel is beyond the scope, they have to update the promotion by themselves. The project will focus exclusively on the providing promotion and notification when user get closer than 20 meters. User can also get direction from current location to the restaurant or hotel destination, and they can also turn of the notification when they think it's annoying

CHAPTER 2 | LITERATURE REVIEW

Business Review

Searching for restaurant now a day is very comfortable. User can use the search engine on the internet with a mobile device or PC. Now a day it's has many search engine such as Google, Yahoo, Bing, or Baidu. Most of search engine contain other features that support to find the restaurant such as the map rough, image search, video search, or news update.

Most people now a day use the small device to use the internet such as smart phone, tablet, or laptop, so the most target now a day is the user of these devices, but all feature that need for using the search the restaurant nearby and find rough need the location base service and map API.

Location base service is software for the mobile device that can tell the base location of the device. It can service the end user with useful information of the location of place that we want to find, but this service is requiring the internet connection and GPS (Global Positioning Service) on the device.

So that mean most smart phone can use the mobile web browser and the application that need internet and GPS. Also, now a day the social network has the effect on people life, the social network such as Facebook, Twitter, or Instagram.

Target

Target of this application is everyone who has the mobile phone with internet connection and GPS. Most specify the tourist that travel and want to find a restaurant this program is the other way to find.

Benefit

- Other way to find the restaurant.
- Other way to promote the restaurant through this application
- Save the time to decision the restaurant and save money for promotion
- Provide the discount for user.

Business Tools/Software Review

Wongnai

Figure 1: Wongnai

Wongnai is an application that helps you find a restaurant around user from a database of more than 120,000 stores and restaurants in Bangkok and other provinces across the country. Moreover, user can also read reviews and see photos from people, check the latest restaurant that your friends ate. User can search the province has restaurant. If a user opens GPS Location Service, App Wongnai will specify our address immediately.

Document Name	Promotion provider_Proposal	Owner	Project Team	Page	7 / 31
Document Type	Project Proposal	Release Date	26 Feb 2014	Print Date	26Mar 2014

Pros

- Good user interface
- User lives far from restaurant. Users can't post or tag in that restaurant.
- Many searching mode:
 - Friends
 - Lover
 - Business
 - Cheap
 - Family and kids
 - Party
 - Super Hungry
 - Fast food

Cons

- Log out delay sometime do nothing
- Log in with Facebook use a lot of time
- Share to Facebook offend time.

Document Name	Promotion provider_Proposal	Owner	Project Team	Page	8 / 31
Document Type	Project Proposal	Release Date	26 Feb 2014	Print Date	26Mar 2014

WhereToEat

Figure 2: WhereToEat

WhereToEat can find restaurants by using GPS. No matter where you are in the world, WhereToEat will display the closest places to eat. User can select from over 45 cuisine types and even get turn-by-turn directions to your chosen restaurant.

An incredibly simple interface hides a sophisticated engine that plugs into the largest restaurant database and global map on the market. Fully customizable, you can order your own list and make maximum use of your GPS.

Pros

- Simple user interface
- Search can be done within a few taps, no typing needed.
- Divided to many categories:
 - General
 - Bakery
 - Buffet
 - Noodle
 - Seafood

Cons

- Still not up to date, Many of the shops have close down
- UI slow performance

Document Name	Promotion provider_Proposal	Owner	Project Team	Page	9 / 31
Document Type	Project Proposal	Release Date	26 Feb 2014	Print Date	26Mar 2014

Trendzap

Figure 3: Trendzap

The new app has garnered the hot menu of restaurant around the country with information and phone number. You can also find restaurants that are around your current location. How to use it is very simple, just press the link on Facebook , it can be used immediately. Do not waste time for hassles. The first page is search page to shows the nearest restaurant. You can also enter a keyword to search for restaurants that have menus you want.

Pros

- Find a restaurant with moderate nationality, name and location or price.
- Rate the restaurant was simple, just a click.
- Can post the food. Or add new restaurant
- Can keep track of friends and share food at the Feed.
- To check in and share on the menu as WeChat, Facebook, or your Twitter .

Cons

- Add the picture once a time.
- Add only the new picture that take at that time.
- Allow only one review per restaurant.
- Cannot find the restaurant from map.

Document Name	Promotion provider_Proposal	Owner	Project Team	Page	10 / 31
Document Type	Project Proposal	Release Date	26 Feb 2014	Print Date	26Mar 2014

Technology Review

1. PHP

Figure 4: PHP

PHP stands for Hypertext Preprocessor or Personal Home page. It is server-side scripting language. PHP is used to produce dynamic Web pages and display in form of an HTML source document with underlying structure of language is C, Java, and Perl. PHP can be usable most in Web servers and also as standalone shell on almost every operating system and platform free of charge.

Alternative Technology

- ASP .NET

The selection of this technology

We chose PHP because it is easy to learn and it can work efficiently. PHP is also free software released under the PHP license and anyone can access it. So, it is extremely popular in the present. Moreover, PHP has community support and a great guide to developing.

Document Name	Promotion provider_Proposal	Owner	Project Team	Page	11 / 31
Document Type	Project Proposal	Release Date	26 Feb 2014	Print Date	26Mar 2014

2. CSS

Figure 5: CSS (Cascading Style Sheets)

Cascading Style Sheets (CSS) is a style sheet language used for describing the presentation semantics (the look and formatting) of a document written in a markup language. Its most common application is to style web pages written in HTML and XHTML, but the language can also be applied to any kind of XML document, including plainXML, SVG and XUL.

CSS is designed primarily to enable the separation of document content (written in HTML or a similar markup language) from document presentation, including elements such as the layout, colors, and fonts. This separation can improve content accessibility, provide more flexibility and control in the specification of presentation characteristics, enable multiple pages to share formatting, and reduce complexity and repetition in the structural content (such as by allowing for tableless web design). CSS can also allow the same markup page to be presented in different styles for different rendering methods, such as on-screen, in print, by voice (when read out by a speech-based browser or screen reader) and on Braille-based, tactile devices. It can also be used to allow the web page to display differently depending on the screen size or device on which it is being viewed. While the author of a document typically links that document to a CSS style sheet, readers can use a different style sheet, perhaps one on their own computer, to override the one the author has specified.

CSS specifies a priority scheme to determine which style rules apply if more than one rule matches against a particular element. In this so-called cascade, priorities or weights are calculated and assigned to rules, so that the results are predictable.

Alternative Technology

-

The selection of this technology

CSS is used to allow the HTML formatting to be done outside of the HTML code and allow for consistent themes to be applied throughout the website.

Document Name	Promotion provider_Proposal	Owner	Project Team	Page	12 / 31
Document Type	Project Proposal	Release Date	26 Feb 2014	Print Date	26Mar 2014

3. HTML 5

Figure 6: HTML5

HTML5 is a markup language for structuring and presenting content for the world wide web and a core technology of the Internet. It is the fifth revision of the HTML standard (created in 1990 and standardized as HTML4 as of 1997) and, as of December 2012, is a W3C Candidate Recommendation. Its core aims have been to improve the language with support for the latest multimedia while keeping it easily readable by humans and consistently understood by computers and devices. HTML5 is intended to subsume not only HTML4 but XHTML 1 and DOM Level 2 HTML as well.

Alternative Technology

- Javascript

The selection of this technology

With HTML5 stands another tech which is very important to professional development – CSS3. Often, when using HTML5 it is assumed that CSS3 is included. This is also the case with our project. HTML5 meshes perfectly with the new CSS specification. CSS allows us to organize our visual styles in one quick worksheet, while keeping the content and structure of our website separate. This will help keep the work organized and allow for easy styling changes. The content of the website is easily changed, while keeping the formatting and overall structure the same.

Document Type	Project Proposal	Release Date	26 Feb 2014	Print Date	26Mar 2014

4. XAMPP

Figure 7: XAMPP

XAMPP is a simulation of the machine to be a Web Server by itself. It use for development and testing software. So, the security system is set to be lower than the actual system. It is free and open-source program that combining of developing system as a package for easy installation. In package, it included Apache that is a Web Server, MySQL that is a free database, PHP language for developing Web applications, FlieZilla that is used to connect to a FTP, and TomCat that is Web server of XAMPP. Moreover, it has an auto to configuration.

Alternative Technology

- MAMP
- AMPPS
- Abyss Webserver

The selection of this technology

XAMPP is a free and open-source program. It is a package that contains several programs about developing software. It easy to uses and install. So, it helps to preparation to use is easier and faster.

Document Name	Promotion provider_Proposal	Owner	Project Team	Page	14 / 31
Document Type	Project Proposal	Release Date	26 Feb 2014	Print Date	26Mar 2014

5. MySQL

Figure 8: MySQL

MySQL is a open source Relational Database Management System. MySQL is very fast reliable and flexible Database Management System. It provides a very high performance and it is multi threaded and multi user Relational Database management system.

MySQL is one of the most popular relational database Management System on the web. The MySQL Database has become the world's most popular open source Database, because it is free and available on almost all the platforms. The MySQL can run on Unix , window, and Mac OS. MySQL is used for the internet applications as it provides good speed and is very secure. MySQL was developed to manage large volumes of data at very high speed to overcome the problems of existing solutions. MySQL can be used for verity of applications but it is mostly used for the web applications on the internet.

Alternative Technology

- Access

The selection of this technology

Many of the world's largest and fastest-growing organizations including Facebook, Google, Adobe, Alcatel Lucent and Zappos rely on MySQL to save time and money powering their high-volume Web sites, business-critical systems and packaged software.

Below you will find valuable resources including case studies and white papers that will help you implement cost-effective database solutions using MySQL.

Document Name	Promotion provider_Proposal	Owner	Project Team	Page	15 / 31
Document Type	Project Proposal	Release Date	26 Feb 2014	Print Date	26Mar 2014

6. iOS technology

Figure 9: iOS technology

iOS is Apple's mobile operating system used to run the popular iPhone, iPad and iPod Touch devices. Formerly known as the iPhone OS, there are over 300,000 iOS applications available for download in the Apple app store, the most popular app store of any mobile device. iOS utilizes a multi-touch interface where simple gestures are used to operate the device, like swiping your finger across the screen to move to the next page or pinching your fingers to zoom out.

Alternative Technology

- Android
- Window phone by Microsoft Corporation
- Black Berry by Research In Motion Limited (RIM)

The selection of this tool

The iPhone is a new mobile device for the developer. It is interesting to develop. iOS user interface is design in multi-touch feature is useful and friendly interface more than other touch screen mobile phone. Additional, nowadays there are many increasing of Smart Phone especially iPhones. Finally, there are many tutorials for iOS to learn from Internet

Document Name	Promotion provider_Proposal	Owner	Project Team	Page	16 / 31
Document Type	Project Proposal	Release Date	26 Feb 2014	Print Date	26Mar 2014

Development Tools Review

1. Adobe Dreamweaver CS6

Figure 10: Adobe Dreamweaver CS6

Adobe Dreamweaver CS6 web design software provides an intuitive visual interface for making and editing HTML websites and mobile apps. Use Fluid Grid Layout designed for cross-platform compatibility to create adaptive layouts. Review designs with Multiscreen Preview before publishing.

Upgrade to Dreamweaver CS6 to efficiently create and test cross-platform, cross-browser HTML5 content using the updated Live View and Multiscreen Preview panels. Build better mobile apps with enhanced jQuery and PhoneGap™ support, and save time uploading large files with the reengineered, multithreaded FTP transfer tool.

Alternative Technology

- Access

Document Name	Promotion provider_Proposal	Owner	Project Team	Page	17 / 31
Document Type	Project Proposal	Release Date	26 Feb 2014	Print Date	26Mar 2014

The selection of this technology

- CodeHighlighting

It helps us quickly scan our code as well as spot any errors. With each type of code there is a different set of highlights to help you differentiate between HTML, CSS, PHP, Javascript and the list goes on. This is really useful if you have a lot of code on a page that is a mix of HTML and dynamic languages like PHP or ASP.

- CodeSuggestion

Another really helpful time saver is DW's code suggestion feature. As you type a HTML tag it will list all the available tags allowing you to key in the first letter of a tag then select the desired tag from a the list. Now this is not as useful for just tags but for attributes it really comes into play.

- Code and Design View

Being a visual person I love to see what my code is crafting. Therefore having the ability to code as well as see what I am getting in the WYSIWIG (What You See Is What You Get) is really helpful. When using DW I personally switch between the code and design view a lot.

Document Type	Project Proposal	Release Date	26 Feb 2014	Print Date	26Mar 2014

2. Xcode

Figure 11: Xcode

Xcode is an Integrated Development Environment (IDE) containing a suite of software development tools developed by Apple for developing software for OS X and iOS. First released in 2003, the latest stable release is version 4.6 and is available via the Mac App Store free of charge for Mac OS X Lion and OS X Mountain Lion users. Registered developers can download preview releases and previous versions of the suite through the Apple Developer website.

Alternative Tool

- No alternative

The selection of this tool

Xcode is the Cocoa application implementation tool. It used from beginners to experienced developer. The easiest way to implementation iOS application is to use this tool.

Document Name	Promotion provider_Proposal	Owner	Project Team	Page	19 / 31
Document Type	Project Proposal	Release Date	26 Feb 2014	Print Date	26Mar 2014

3. iOS Simulator

Figure 12: iOS Simulator

iOS Simulator is a valuable tool, never make it the only way you test an app, because iOS Simulator is an app running on a Mac, it has access to the computer's memory, which is much greater than the memory found on a device. As a result of the increased memory, iOS Simulator is not an accurate test of an app's memory usage. For this same reason, you should always test the performance of your app's user interface on a device.

Alternative Tool

- No alternative software tool for simulating iOS devices.

The selection of this tool

The iOS simulator is simple and suitable for simulating application without using the actual device. It is fast and easy

Document Type	Project Proposal	Release Date	26 Feb 2014	Print Date	26Mar 2014

CHAPTER THREE | QUALITY STANDARD

3.1 ISO29110 for Very Small Entity (VSE)

ISO29110 is a guide applies to a Very Small Entity (VSE), enterprise, organisation, department or project up to 25 people, dedicated to software development. The Guide provides Project Management and Software Implementation processes which integrate practices based on the selection of ISO/IEC 12207- *Systems and Software Engineering —Software Life Cycle Processes* and ISO/IEC 15289 *Software Engineering – Software Life Cycle Process – guidelines for the content of software life cycle process information products (documentation)* standards elements.

3.1.1 Project Management process

The purpose of the Project Management process is to establish and carry out in a systematic way the tasks of the software implementation project, which allows complying with the project's objectives in the expected quality, time and cost.

Selected process

- 3.1.1.1 Project Planning Process
- 3.1.1.2 Project Plan Execution Process
- 3.1.1.3 Project Assessment and Control Process
- 3.1.1.4 Project Closer Process

3.1.2 Software Implementation process

The purpose of the Software Implementation process is the systematic performance of the analysis, design, construction, integration and tests activities for new or modified software products according to the specified requirements.

Selected process

- 3.1.2.1 Software Implementation Initiation Process
- 3.1.2.2 Software Requirements Analysis Process
- 3.1.2.3 Software Architectural Design Process
- 3.1.2.4 Software Construction Process
- 3.1.2.5 Software Integration and Test Process
- 3.1.2.6 Software Delivery Process

Document Name	Promotion provider_Proposal	Owner	Project Team	Page	21 / 31
Document Type	Project Proposal	Release Date	26 Feb 2014	Print Date	26Mar 2014

CHAPTER 4 | PROJECT PLAN

Motivation

The motivation for our project is twofold. Our primary goal is to establish an application for further development into a system focusing on letting user know the special offer. The secondary goal is that with the establishment of this application, system can provide a much needed restaurant, and help user to get direction to the restaurant. Within this second motivation is also the simply way to find which restaurant created promotion.

Aims and Objectives

Aims

This application will develop follow by ISO29110 and allow a user conveniently find a special offer or promotion from the restaurant or hotel, as well as get notification while user get close to the restaurant. This application also provides the route and distance of the restaurant. This application will advise a famous restaurant to user without any typing. It can receive information from the owners who want to promote their business. It can receive feedback and review from user. User allows to share and check in to show their friend. We will develop this application to be guidance for the tourist.

Objective

- To provide a software in mobile platform and database to a Promotion Provider System.
- To provide a system's notification to notify user.
- To allow the system easily for adding and removing restaurant or hotel from system.
- Apply knowledge to develop real software application.
- Provide a promotion and discount to user.
- Provide the recommended a restaurant to tourists.

Document Name	Promotion provider_Proposal	Owner	Project Team	Page	22 / 31
Document Type	Project Proposal	Release Date	26 Feb 2014	Print Date	26Mar 2014

System Architecture

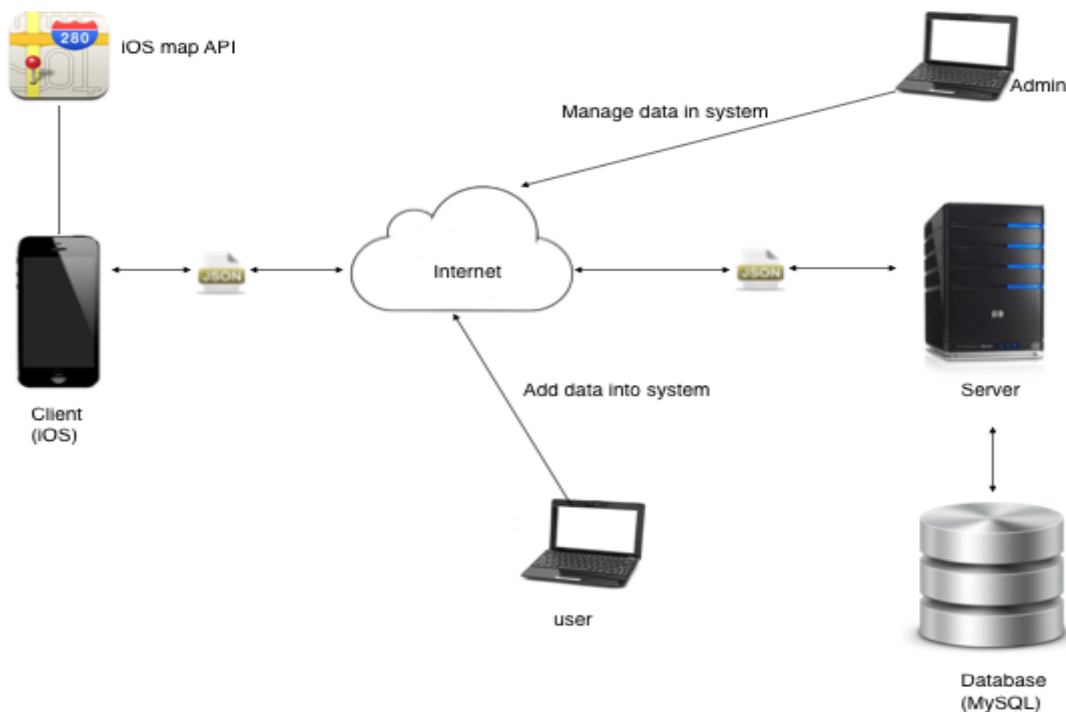

Figure 13: System Architecture

This project will have 2 side, the first is client side that is the iPhone application. The client will use apple API to provide a map. The second is server side that are web and database. In this system client need to connect a server, then server will connect to the database and sent the data back to the client via the internet in the form of JSON. The application(client) cannot work without connect to server because every data and information of the restaurant of the hotel will store in the database server. User(Hotel or restaurant) can add promotions into our system, and admin can also manage data in the system which are adding, editing and deleting.

Document Name	Promotion provider_Proposal	Owner	Project Team	Page	23 / 31
Document Type	Project Proposal	Release Date	26 Feb 2014	Print Date	26Mar 2014

Deliverables and Limits

Deliverable

- Application will reach user to the destination.
 - User arrive the destination by using the map of this application.
- User will found the UI that simple and easy to use.
- User can register and login to the system.
- User can found the restaurant while driving without any typing to search.
 - For safety, user can pay attention to driving, but they can also get the notification to receive the interesting promotion.
- User can share the restaurant to Facebook.
 - User allows to check in and share the location to Facebook.
- User can use the promotion that restaurant contact with application.
- User can specify type of food.
- User can upload the picture.
- Documentation
 - Proposal
 - Project plan
 - Software requirement specification
 - Software design documentation
 - Unit test record
 - Traceability record
 - Test plan and Test record
 - Integration test record
 - System test record

Limits

- This application support only iOS7 on device iPhone4 and iPhones 5, iPod touch.
- Our focus of development and testing is limited exclusively to the technologies established, and we share the limits involved with developing on HTML5, CSS3, PHP, Objective-C and MySQL.
- This application not available without Internet connection.
- GPS may not accurate in the rainy day.
